SMART CITY CLUSTER OF LATVIA

Smart city cluster is a platform that joins the Latvian entrepreneurs and research organizations to work together to enable enterprises to develop competitive products and services that are related to smart cities or a smart city concept. The project aims to become a main driving force for development of new smart city concept related solutions, technologies and products in Latvia:

representing a significant number of companies in various areas of smart specialization;

accumulating a large amount of specific knowledge about smart cities;

transferring it to entrepreneurs for development of new products and services as well as strengthening of their exportability, thus creating at least 15% export growth in 3 year period in companies which are participating in the Smart city cluster project.
