

Construction Information System

Published: 09.10.2020.

The Construction Information System is a State system which includes the information and documents necessary for the construction process and its control and ensures the circulation of information among public administration, control institutions and participants of construction, as well as involvement of the public in the construction process. The Construction Information System is created and maintained by the ministry responsible for the construction sector.

The Construction Information System includes registers provided for in this Law and other laws governing construction, energy performance of housing and buildings.
